

Professional Font Management

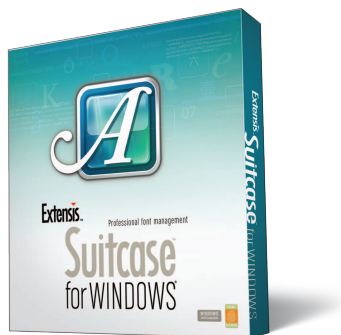

Whether working in a workgroup or alone, if you're a creative professional in a Windows environment, you no longer have to compromise with your font management. You have Suitcase for Windows.

Anyone familiar with fonts knows that they aren't just files. They are software, interacting directly with Windows and your design applications. So, having too many active fonts or having incorrect, missing or corrupt fonts can cause trouble—crashing systems, impacting layout, even changing the whole look of a document. If you work with fonts daily, then you need reliable font management.

Suitcase for Windows provides the type of industrial-strength font management that Windows users have been waiting for. It is the ideal add-on for InDesign, Illustrator and QuarkXPress users who work with fonts daily, speeding your workflow and making your design applications more responsive and reliable.

Seamless Font Workflow

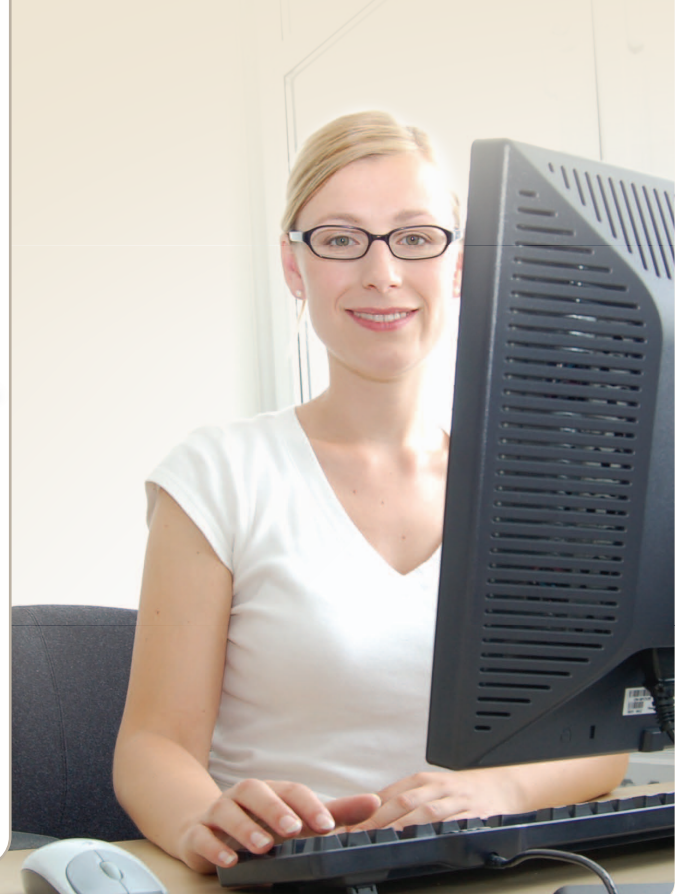

For too long, Windows users have been forced to clog up their system memory and font menus with hundreds, even thousands, of fonts in order to make sure those fonts were available when opening a document. No longer.

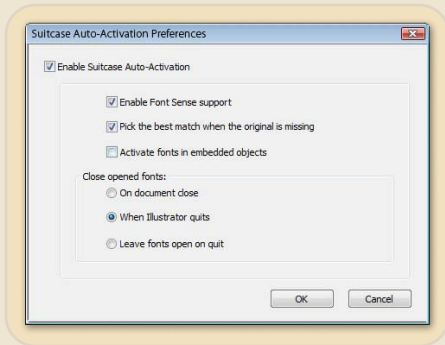

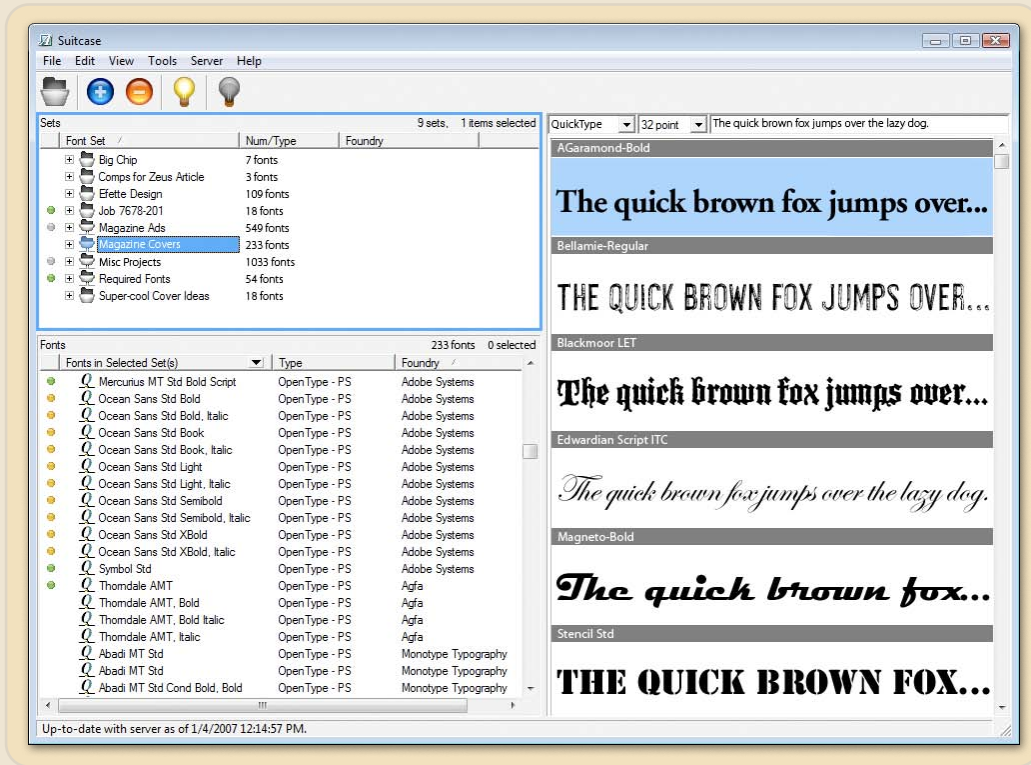

With Suitcase for Windows, only the fonts you need are activated when you open a document and deactivated when you close. Font Sense™ - powered Auto-Activation Plug-ins allow Suitcase for Windows to accurately match and activate the exact versions of the fonts used in your document from fonts stored in the Suitcase database. This allows you to work with thousands of fonts seamlessly and fluently in InDesign, Illustrator and QuarkXPress.

TOP REASONS You Need Suitcase for Windows

- 1 Allows you to work with fonts confidently in your design applications
- 2 Ensures you have the exact version of the font you need
- 3 Stops potential font wrecks (due to missing or substituted fonts)
- 4 Offers secure font repository for easy access and back-ups
- 5 Windows® Vista™ compatible
- 6 Available as single-user desktop or as Client for Suitcase Server X1

Windows® Vista™ Compatible

Suitcase for Windows is Windows Vista ready. It also offers support for Windows XP and Windows 2000.

Easy-To-Use Interface

Suitcase's main font window puts all your font management features right at your fingertips, making it easy to find, group, preview and activate fonts.

Keep Font Library Secure and Organized

Suitcase is the only Windows font manager with the option to use a secure repository—the Font Vault—that keeps fonts safe from accidental moves or deletions.

Powered by Font Sense™

The most advanced font matching technology available, only Font Sense allows for a deep level of font analysis when identifying fonts for auto-activation. Font Sense uses multiple criteria—font type, foundry, version, etc.—to ensure that when you open a document, the exact version of the font you need is selected and activated.

Industrial-Strength Windows Client

Suitcase for Windows is also available as a fully functional Windows Client for Suitcase Server X1—offering a viable, easy to administer, client/server font manager for Windows-based or cross-platform creative workgroups.
